RACE COURSE, BARODA – 390 007.

TECHNICAL SPECIFICATIONS
FOR

66 kV LIGHTNING ARRESTORS
SPECIAL INSTRUCTIONS TO BIDDER

Please read following instructions carefully before submitting your bid.

1. All the drawings, i.e. elevation, side view, plan, cross sectional view etc., in AutoCAD format and manuals in PDF format, for offered item shall be submitted. Also the hard copies as per specification shall be submitted.

2. The bidder shall submit Quality Assurance Plan for manufacturing process and Field Quality Plan with the technical bid.

3. The bidder shall have to submit all the required type test reports for the offered item. In absence of this, the evaluation shall be carried out accordingly as non-submission of type test reports.

4. The bidder must fill up all the point of GTP for offered item/s. Instead of indicating “refer drawing, or as per IS/IEC”, the exact value/s must be filled in.

5. All the points other than GTP, which are asked to confirm in technical specifications must be submitted separately with the bid.

6. The bidder is required to impart training in view of manufacture, assembly, erection, operation and maintenance for offered item, at his works, to the person/s identified by GETCO, in the event of an order, free of cost. The cost of logistics will be bear by GETCO.

7. Please note that the evaluation will be carried out on the strength of content of bid only. No further correspondence will be made.

8. The bidder shall bring out all the technical deviation/s only at the specified annexure.

9. The bidder should indicate manufacturing capacity by submitting latest updated certificate of a Chartered Engineer (CE).
QUALIFYING REQUIREMENT DATA
(For Supply)

Bidder to satisfy all the following requirements.

1) The bidder shall be Original Equipment Manufacturer (OEM). The offered equipment have to be designed, manufactured and tested as per relevant IS/IEC with latest amendments.

2) The minimum requirement of manufacturing capacity of offered type, size and rating of equipment shall be \textbf{7 times tender / bid quantity}. The bidder should indicate manufacturing capacity by submitting latest updated certificate of a Chartered Engineer (CE).

3) Equipment proposed shall be of similar or higher rating and in service for a minimum period of THREE (3) years and satisfactory performance certificate in respect of this is to be available and submitted.

4) The bidder should clearly indicate the quantity and Single Value Contract executed during last FIVE (5) years, for the offered equipment. Bidder should have executed one single contract during last five years for the quantity equivalent to tender / bid. The details are to be submitted in following format,

<table>
<thead>
<tr>
<th>Sr. No</th>
<th>ITEMS SUPPLIED TO</th>
<th>ORDER REFERENCE No. &amp; DATE</th>
<th>ITEM S</th>
<th>QUANTITY</th>
<th>ORDER FULLY EXECUTED YES/NO</th>
<th>STATUS, IF ORDER UNDER EXECUTION</th>
<th>REMARK</th>
</tr>
</thead>
</table>

5) Equipment offered shall have Type Test Certificates from accredited laboratory (accredited based on ISO/IEC Guide 25 / 17025 or EN 45001 by the National accreditation body of the country where laboratory is located), as per IEC / IS / technical specification. The Type test reports shall not be older than FIVE years and shall be valid up to the expiry of validity of offer.
TECHNICAL SPECIFICATION OF 66 kV LIGHTNING ARRESTORS

1.1 SCOPE:

1.1.1 This specification covers the design, manufacture, assembly testing at manufacture's works, and delivery of heavy duty station class lightning arrestors, complete in all respects, confirming to modern design and practice for protection of transformers, sub-station equipment's and overhead lines. The scope also includes supply of hot dip galvanized support structures as per GETCO drawing attached and if indicated in Schedule - A of respective tender.

1.2 STANDARDS:

1.2.1 The lightning arrestors covered by this specification shall comply with the requirements of latest, edition of IEC publication No. 60099 – 4 / 1991 (2004-05), except specified, otherwise in the specification.

1.2.2 Lightning Arrestors, meeting the requirements of any other authoritative standards which ensure equal / better quality than that as per the standards mentioned above shall, also, be acceptable. When the lightning arrester confirms to any other standards, the salient points of difference between the standard adopted and standard given above shall be specifically brought out in the bid for each item of difference.

1.3 DRAWINGS & DOCUMENTS:

The Bidder shall furnish one set of following drawings along with the offer:

- General outline drawings of the complete arrester with technical parameters.
- Drawing showing clearance from grounded and other live objects and between adjacent poles of surge Arresters, required at various heights of surge Arresters.
- Drawing showing details of pressure relief devices.
- Detailed drawing of discharge counters along with the writing and schematic drawing of discharge counter and meter.
- Outline drawing of insulating base.
- Details of grading rings, if used.
- Mounting details of Surge Arresters.
- Details of line terminal and ground terminals.
- Details and dimensions of ZnO block.
- Volt-time characteristics of Surge Arresters.
Details of galvanizing being provided on different ferrous parts.
Details of Master name plate and individual unit name plate.
The detailed dimensional drawing of porcelain housing such as ID, OD thickness and insulator details such as height, profile of petticoats, angle of inclination and gap between successive petticoats, total minimum creep age distance etc.

In the event of an order the bidder has to submit the above drawings in three sets for approval during commencement period and after the approval, the set of approved copies of drawings in hard copy and soft copy (AutoCAD format) shall be sent as follows:
- Each consignee---------3 sets
- Each respective Suptd. Engr. - 2 sets
- Chief Engineer (Project)—2 sets

1.3.1 Within fifteen days of the receipt of order, the tenderer shall submit above drawings for the purchaser's approval.

1.3.3 The bidder may submit any other drawing found necessary in addition to the drawings stated above.

1.3.4 QUALITY ASSURANCE PLAN:

1.3.4.1 The Bidder shall invariably furnish following information alongwith his offer. Information shall be separately given for offered surge arrester / Items / parts (associated with it) with surge arrester.
   1. Statement giving list of important raw materials names of sub-suppliers for the raw material, list of standards according to which the raw material are tested, list of tests, normally carried out on raw material in presence of Bidder's representative, copies of test certificates.
   2. Information and copies of test certificates as in (I) above in respect of bought out items.
   3. List of manufacturing facilities available.
   4. Levels of automation achieved and list of areas where manual processing exists.
   5. List of areas in manufacturing process where stage inspections are normally carried out for quality control and details of such tests and inspections.
   6. Special features provided in the equipment to make it maintenance free.
7. List of testing equipment available with the supplier for final testing of equipment specified and test plant limitation, if any, vis-à-vis the type, special, acceptance and routine tests specified in the relevant standards. These limitations shall be very clearly brought out (If any) from specified test requirements.

1.3.4.2 The successful Bidder shall within commencement period of order submit the following information to the purchaser.

I) List of raw material as well as brought out accessories and the name of the material as well as brought out accessories and the names of sub-suppliers selected from those furnished along with the offer.

II) Type test certificates of the raw material and brought out accessories.

III) Quality assurance plan (QAP) with hold points for purchaser’s inspections shall be submitted with technical bid and in the event of an order for approval. The QAP and purchaser hold points shall be discussed between the purchaser and the supplier before the QAP is finalized.

IV) Field Quality Plan shall be submitted with technical bid and in the event of an order for approval.

V) Operation and Maintenance manuals shall be submitted with technical bid and in the event of an order for approval.

The bidder shall invariably furnish following information along with the offer.

a) Names of sub-suppliers for the raw materials, list of standards according to which the raw materials are tested, list of tests normally carried out on raw materials in presence of supplier’s representative, copies of test certificates.

b) Information and copies of test certificates in respect of bought out accessories.

c) List of manufacturing facilities available.

d) Level of automation achieved and lists of areas where manual processing still exists.

e) List of areas in manufacturing process, where stage inspection is normally carried out for quality control and details of such tests and inspections.
f) List of testing equipments available with supplier for final testing equipment and test plant limitation if any, vis-à-vis the type, special, acceptance and routine test specified in the relevant standards. These limitations shall be very clearly brought out in the specified test requirement.

1.3.4.3 The successful bidder shall submit the routine test certificates of bought out items and raw materials at the time of routine testing of the fully assembled arrester.

1.4 TYPE:

The metal oxide type lightning arrestors shall be designed to provide maximum possible protection against lightning and switching surges. Supporting insulators, terminal connectors and other components as specified hereafter, shall be provided with arrestors.

The metal oxide type lightning arrestors shall be of class 'A' pressure relief device and long duration Class-III.

1.5 DESCRIPTION:

1.5.1 Design & Construction:

1.5.1.1 Arrestors shall be without series gaps as per the requirement along with characteristic of elements.

1.5.1.2 The non-linear resistor blocks shall have non-ageing characteristic and stable thermal properties. The blocks shall preferably be metalised on the flat surface for ensuring good electrical contact.

1.5.1.2.1 The arrestors shall be complete with suitable grading devices, wherever necessary and shall be provided with an insulating base at the bottom. The clamps required to fix the surge counter shall have to be provided with the surge counter. Braided flexible copper jumper shall be provided for bypassing surge counter, whenever required.

1.5.2 Each individual component unit of the arrester stack shall have its arrester elements hermetically sealed under dry inert air and fully protected against
ingress of moisture into the arrestor. The details like material, cross section/thickness etc shall be indicated in cross sectional drawing.

1.5.2.1 The arrestor, when energized at rated operating voltage, shall not exhibit any visible corona, when viewed in complete darkness.

1.5.2.2 All arrestor units shall be provided with pressure relief class 'A' devices, to limit the internal arrestor pressure to obviate explosion or violent shattering of porcelain housing.

1.5.2.3 Porcelain Housing:
All porcelain used in or with each arrestor shall be manufactured by the wet process, be free from lamination, cavities or other flaws, affecting mechanical & dielectric strength and shall be vitrified property and non-porous. The creepage distance along with external surface shall be large enough to ensure that surface contamination which is possible under site condition will not adversely affect the performance of arrestors.

1.5.2.4 Pressure Relief Device:
The arrestors shall be provided with efficient pressure relief device so as to check bursting of lightning arrestors, in case, excessive gas pressure is built up and in case, it losses its ability to effectively dissipate the energy due to any operation. The tenderer shall submit detailed information and literature on pressure relief class ‘A’ device of lighting arrestors.

1.5.2.5 Terminal Connectors:
Each lightning arrestor shall be supplied with compression joint type terminal connector suitable for ACSR Conductor specified in Schedule – A of respective tender. The bolt and nuts shall be of stainless steel. 2 nos SS washer and 2 SS nuts (including lock nut) for each bolt shall be supplied. Each terminal connector shall be suitable for vertical / horizontal take-off.

1.5.3 Galvanizing:
All metal parts exposed to weather and likely to be subjected to corrosion, shall be hot dip galvanized as per IS: 2629 (latest edition). Bolts, Nuts and Washers shall be electro zinc plated.

1.5.4 Name Plate:
Each arrestor shall have non-corrosive nameplate, legibly and indelibly marked and securely fixed to it. They shall be provided with the
information as required by relevant standard. The words 'GETCO' shall, also, be punched on it after inspection of lightning arrestor is over.

1.5.5 Surge Counter:
Each lightening arrestors shall be provided with a recording type surge counter with vertical mounting. The installation of surge counter shall have practically no effect on the operation. The number of discharges recorded by the counter shall be visible through inspection window. The connection of LA to Surge Monitor shall be made from bottom of surge monitor and there shall not be any opening on top of surge monitor. The connecting cable shall be double PVC sheathed stranded copper flexible twin cables of 50 sqmm, duly ferruled by copper lugs on both sides. The length of cable shall be 2 Meter each.

1.6 SYSTEM VOLTAGE:

<table>
<thead>
<tr>
<th>Nominal System Voltage</th>
<th>Highest System Voltage</th>
</tr>
</thead>
<tbody>
<tr>
<td>66 KV</td>
<td>72.5 KV</td>
</tr>
</tbody>
</table>

1.6.1 Rated Arrestors Voltage:
The rated arrestor voltage shall be as under:-

<table>
<thead>
<tr>
<th>Normal System Voltage</th>
<th>Arrestor Voltage</th>
</tr>
</thead>
<tbody>
<tr>
<td>66 KV</td>
<td>60 KV</td>
</tr>
</tbody>
</table>

1.6.2 Nominal Discharge Current:
The arrestor shall have a nominal discharge current of 10 kA (8/20 micro-sec) and shall be of heavy-duty station class type with long duration Class – 3.

1.6.3 Maximum residual Voltage:
The maximum residual voltage at nominal discharge current of 10 kA with 8/20 micro-second current wave shall not exceed 190 kV (Peak).

1.6.3.1 Maximum Continuous Operating Voltage:
The maximum continuous operating voltage shall be 48 kV min.

1.6.3.1 Maximum Continuous Operating Voltages:
The maximum continuous operating voltages shall be as per IEC60099-4 cl. 3.2.1.

1.6.3.2 Energy absorption capability shall be 5 in kj/kV. Submit calculation with technical bid.

1.6.4 System Neutral Connection:
The system is an effectively earthed neutral system.
1.6.5 Out door Installation :
All the lightning arrestors shall be suitable for outdoor installation.

1.6.6 Altitude :
The lightning arrestors covered in this specification will be installed at an altitude not more than 1000 meters.

1.6.7 Special Condition :
Maximum temperature for a few days, in a year, is likely to go to 50°C and humidity during monsoon is likely to reach the value of 95%. The arrestors offered must withstand these climatic conditions without deteriorating effects.

1.6.8 The lightning ancestors shall be suitable for 1.2/50 micro-sec lightning impulses voltage of 350 kV peak and one minutes power frequency withstand voltage of 140 kV rms.

1.6.9 Impulse withstand voltage of equipment's to be protected :
The BIL of transformer and circuit breakers is 350 kV (Peak).

1.6.10 Overhead Earth wire:
Solidly grounded overhead Earth wire/s shall be provided for the sub-station and Transmission Lines.

1.6.11 Physical data to be supplied for the Arrestors :
Technical and guaranteed particulars in the Appendix – I shall be furnished with the bid. Drawings showing, dimensions, (actual figures), arrangement and clearances (actual figure) required shall, also be furnished. Bid without details against guaranteed particulars will be considered as incomplete offer. List of orders executed for specified rating of, arrestor along with performance reports for the same shall be submitted.

1.6.12 Completeness of Equipments:
All fittings and accessories which may not be specifically mentioned in this specification but which are useful or necessary for lightning arrestors shall be deemed to be included in the specifications and shall be furnished by the bidder without extra charges.

1.6.13.1 Type Test:
All the Lightning Arrestors offered shall be fully type tested as per relevant standard (latest edition) at the Government approved laboratory. The Bidder shall furnish two sets of type test reports for the complete Lightning Arrestors along with the test reports of porcelain housing of the type and Design offered by him along with the bid. The Type Test reports shall not be older than 5 (five) years and shall be valid up to the expiry of validity of offer, otherwise the offer will not be considered.

The following type test reports shall be submitted with the technical bid. The offer submitted without valid type test report shall be evaluated accordingly.

   (b) 10 KA with 8/20 microsecond wave shape. |
| 10 | Special Seal leakage test for a duration of 24 hrs, to check the water penetration, on any one randomly selected sample from every 50 (Fifty) or below nos. of LA offered for inspection, shall be carried out and report shall be submitted. |

1.6.14 Creepage Distance:
The lightning arrestors are required to be installed in highly polluted atmosphere. Hence the total minimum creepage distance shall be 1810 mm.

1.6.15 All necessary accessories and earthing connection leads between the bottom of the Arrester and the discharge counter shall be in the supplier’s scope. The discharge counter shall be so designed that the readings of discharges recorded by the counter and the readings of milliamp meter shall be clearly visible through an inspection window to a person standing on ground. The
minimum height of support shall be 2.5 M. *The live part to plinth level clearance shall be maintained as – 4000 mm. Mounting bolt, Nut, washers etc shall be supplied with each LA.*

1.6.16 The mounting of LA shall be suitable to GETCO structure. If required necessary MS, HDG 8 mm thick adaptor plate with both PCD drilled in, shall be supplied as a part of supply. The structure drawing is attached herewith.
